Astar 2.0 is built upon a clear long-term direction. Astar have defined their mission to empower billions of individuals and enterprises by harnessing the potential of Web3

Astar aim to create a world where decentralized systems empower users to take control of their data, and privacy, and empower local communities, on and offline, to come together

MOONBEAM LIQUIDITY

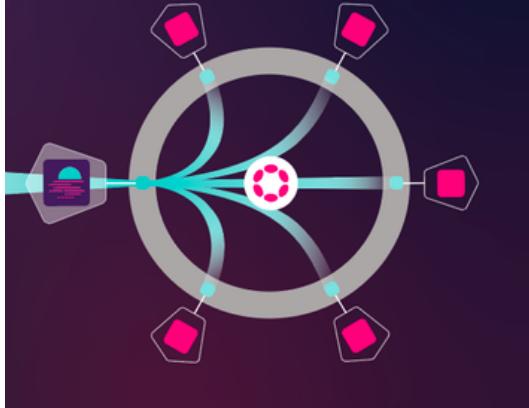

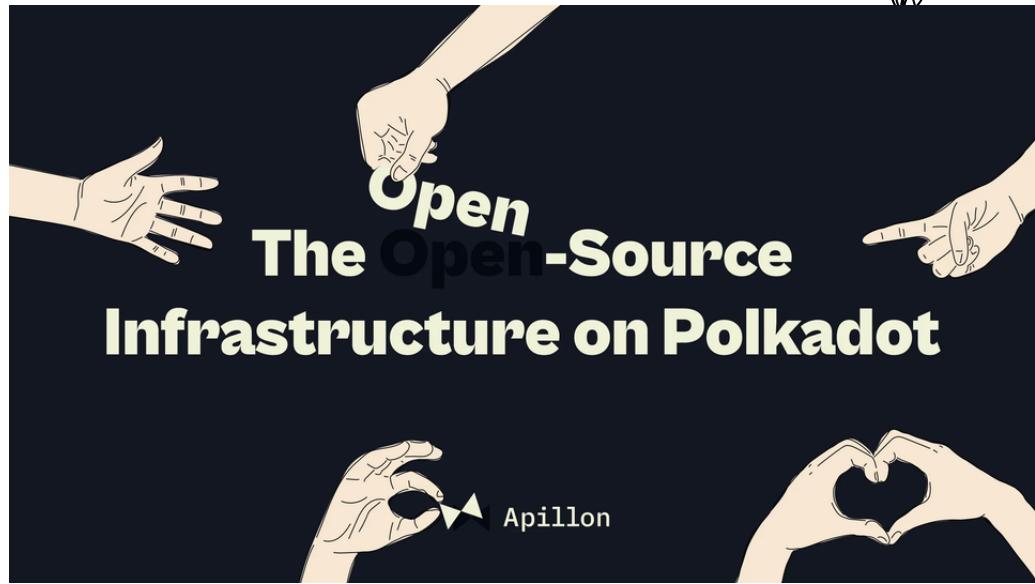

Part of what powers MRL is a new feature in which any ERC-20 created in the Moonbeam EVM can be moved around the Polkadot Ecosystem via XCM, thanks to a new implementation of XC-20.

Moonbeam Routed Liquidity (MRL) enables the easy flow of crypto liquidity into and across the Polkadot ecosystem from other ecosystems like Ethereum, Solana, Polygon, or Avalanche. With MRL, users can move their liquidity to and from Polkadot with a clean and simple UX.

Liquidity Using Wormhole

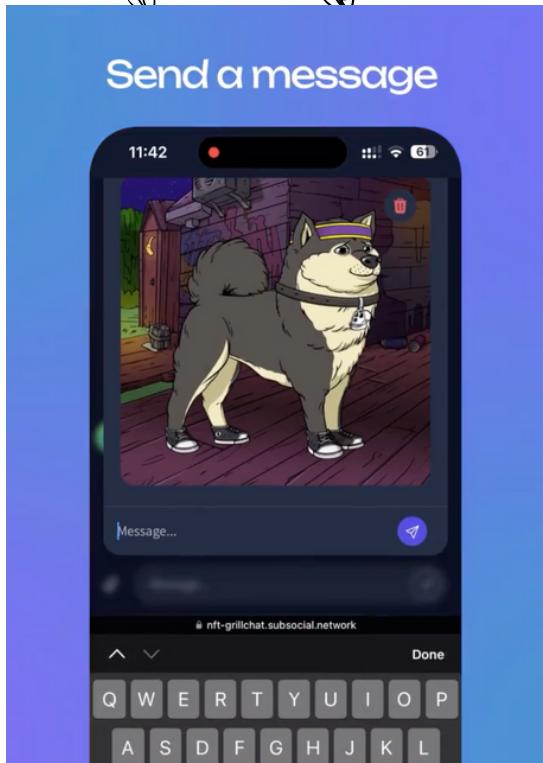

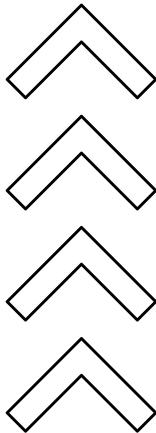

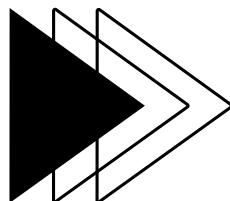

With this Proposal, the Apillon platform would transition to an open-source infrastructure solution with permanent freemium access, governed by the community, and thus become a common good project, further spurring Web3 adoption, Polkadot ecosystem growth, and DOT utility.

FIRST XCM TRANSFER ON SORA

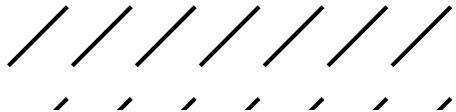

Ahead of the release of the HASHI bridge in Polkaswap DEX Testnet (test.polkaswap.io) upgrade, it is already possible to test sending assets to and from Rococo to SORA.

This allows testing the next SORA <> KUSAMA bridge that will be made very soon to SORA Network through Polkaswap.
